Elements of the project

CONCEPT SHEET

“The glory of gardening: hands in the dirt, head in the sun, heart with nature. To nurture a garden is to feed not just the body, but the soul” – Alfred Austin

• What is tropical garden ?

Tropical landscape are defined by the area. They are native to which is tropical areas. They are usually recognized by the bright green of the greenery. This light witness in the area and the vibrant. colour of flowers.

Key elements used in Tropical Garden ?

Because the air of peace and tranquillity is at the heart of an exotic garden display, one can adapt this design style to suit any climate! The plants don't have to be *technically* tropical in nature; they just need to contribute to the overall appearance and character of a tropical garden. Regardless of where you live, these are the major elements needed to create the tropical garden of your dreams:

Focus on foliage: Large, lush, and lavish foliage is often the main focus in tropical gardens. These plants flaunt virtually all shades of green with a striking contrast of textures between large-leafed plants, those with long, slim fronds, and the lacy look of ferns.

Surround yourself with plants: Plant densely on multiple levels using plantings of varying heights, from towering trees to ground cover. Hanging baskets and raised beds are fantastic for creating an encompassing cocoon of plant life.

Keep it vibrant: Tropical gardens wouldn't be complete without the hot colours of flowers and accessories like cushions, bringing to mind the exotic birds that inhabit rain forests. Bright shades of yellow, orange, red, and pink are just right for accenting tropical gardens.

Celebrate water: An abundance of large-leafed plants implies a wealth of water, and what better way to suggest this than including a water feature? The sight, sound, and fresh scent of flowing water really plays up the feeling of being in a tropical location.

Materials used in this garden :

- o Mangalore Tile
- o Kaul
- o Bamboo
- o Stone Brick
- o Sculpture
- o Plants
- o Lawn
- o Furniture
- o Lights

Why did we choose Tropical garden ?

The reason behind it is unlike other types of climate tropical weather supports the growth of vibrant fresh produce all year . being able the enjoy truly fresh food at any time of the year is a benefit that can translate into health heath. When summer heat sends you scurrying indoors for air conditioning, tropical gardens stage outstanding growth. Tropical plants thrive in heat and humidity, so it's best to site a tropical garden where warmth multiplies.

Superiority of Tropical Garden ?

Tropical and foliage plants can offer extra paybacks to your customers with health-promoting benefits like filtering the air, reducing stress, and absorbing noise. Studies show that being around plants can help people concentrate in the home and workplace.

Tropical gardening is not much different than any other types of gardening. Plants still share the same basic needs—healthy soil, water, and proper fertilization. With tropical gardening, however, you don't have to worry about overwintering your plants since these climates remain warm year round.

Main features include plants with very large leaves, vegetation that builds in height towards the back of the garden, creating a dense garden. Large plants and small trees hang over the garden, leaving sunlight to hit the ground directly.

Components used in this garden

- o Chinese evergreens
- o Enset or ensete
- o Zebra plant
- o Miniature coconut palm
- o Cordyline reflexa
- o Purple heart
- o Showboat
- o Female dragon
- o Devil's ivy
- o Blushing philodendron
